

The Honeywell Wireless Occupancy Solution delivers the energy-saving benefits of occupancy sensors without sacrificing comfort. The age-old problem of running wires has been solved — there aren't any wires to run. Honeywell's wireless technology makes installation clean and easy. Your customers will enjoy saving energy, and you'll enjoy saving installation time. With the Honeywell Wireless Occupancy Solution, everyone wins.

Maximize Both Comfort And Savings

From hotels to dormitories, if your facility has people then it has the ongoing debate: what's more important, occupant comfort or energy savings? The Honeywell Wireless Occupancy Solution lets you strike the perfect balance.

- **Delivering Comfort** — Combining a door switch with an occupancy sensor assures that the thermostat won't shift into setback mode when a room is occupied.
- **Delivering Savings** — As soon as a room is unoccupied, the thermostat can shift into setback mode; you won't waste money heating or cooling an unoccupied room. Save even more money when windows or patio doors are left open; there's no need to waste energy cooling a space when your guests are enjoying a nice breeze.

IDEAL RETROFIT SOLUTION

Don't stress out thinking about running wires, configuration headaches and more. As always, Honeywell makes installation as easy as possible.

- **Wireless** — Running wires is a thing of the past. Wireless door and occupancy sensors make installation a breeze.
- **Preconfigured** — The door sensor and occupancy sensor are already paired to the receiver straight out of the box. The work's been done for you!
- **Universal** — Honeywell's Wireless Occupancy Solution works with the SuitePRO™, MultiPRO™, T7350 family and any thermostat that has remote setback terminals.
- **Impeccable Range** — Mount the receiver inside the equipment or behind a wall and still receive accurate signals from the sensors.

Whether you're remodeling, starting from scratch or simply wanting to upgrade to be more green, the Honeywell Wireless Occupancy Solution makes it easy.

ROOM-BY-ROOM SAVINGS

In lodging facilities, HVAC accounts for roughly 30% of the energy usage. Using the Honeywell Wireless Occupancy Solution directly saves you money by not heating or cooling empty rooms — that's money you can apply directly to your bottom line.

Learn More

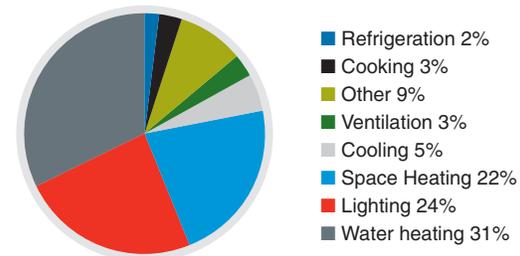

For more information on the Honeywell Wireless Occupancy Solution, call **1-800-466-3993** or visit **beyondinnovation.honeywell.com**.

Automation and Control Solutions

Honeywell
1985 Douglas Drive North
Golden Valley, MN 55422-3992
