

# BOILER

## *Fast Fact*

Boilers are set up to heat your home when the outside temperature is extremely cold. But during milder temperatures, it still heats up like it's freezing outside, and that extra energy is wasted — and expensive. Outdoor Reset Systems saves energy by adjusting the boiler as needed based on the outdoor temperature.

# Enjoy The Energy Savings Of Improved Boiler Efficiency

Homeowners like you have always had to make a choice:

- > **adjust the thermostat for comfort**
- or
- > **adjust it for energy savings**

With Honeywell's full line of outdoor reset controls, you can have both.

## How It Works

Outdoor reset saves you money by automatically adjusting the boiler settings based on the outdoor temperature. An outdoor temperature sensor sends information to the control, which then calculates the most efficient setting and adjusts the system for you.

But all of that happens behind the scenes. All you need to do is set the thermostat to the settings where you're comfortable. Honeywell's outdoor reset controls will handle all the work to make sure your boiler operates efficiently and effectively for energy savings.

**Save energy without sacrificing comfort.**

## Saving Energy Saves Money

Outdoor reset saves energy by running your boiler at more efficient settings. The key is that the boiler can maintain comfort while running at a lower temperature, so less energy is used when it's on and less is wasted during off cycles. The boiler will run longer at a lower temperature, so your radiator gives off constant heat to maintain your desired setting without spurts of heat followed by cold. You'll enjoy consistent comfort while saving energy at the same time. Plus, if your boiler also handles the hot water for your home, outdoor reset controls will give hot water priority to ensure that all household needs are met.

For the environment, efficiency means fewer resources are being used — and that also means lower energy bills for you. Adding a Honeywell outdoor reset control improves boiler efficiency by up to 15%\* — enough to pay for itself in one to two years. That's a return on investment that's hard to beat.

## Start Saving Today

Whether you're having a new boiler installed or your current one serviced, there's a Honeywell solution that's right for your home — and your wallet. Ask your contractor about installing a Honeywell outdoor reset control in your home. You'll see the savings right away, and you'll see them continue year after year.

\*Honeywell Inc. 1979 Study; Control Systems Providing Energy Savings with single and multi-zone Hydronic Heating. 15% is the average energy savings and can only be achieved when installing an outdoor reset model, domestic hot water priority is off and the unit is installed as directed.
